## IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A diffuser sheet for LCD applications comprising at least one light-scattering polymethyl methacrylate layer having a thickness in the range from 2 to 5 mm and an average surface roughness  $R_z$  in the range from 5 to 50  $\mu$ m, wherein the polymethyl methacrylate layer which comprises a polymethyl methacrylate matrix and also from 0.5 to 59.5% by weight, based on the weight of the light-scattering polymethyl methacrylate layer, of spherical scattering particles (A) whose median size  $V_{50}$  is in the range from 0.1 to 40  $\mu$ m, and whose refractive index differs from that of the polymethyl methacrylate matrix by a value in the range from 0.02 to 0.2, and from 0.5 to 59.5% by weight, based on the weight of the light-scattering polymethyl methacrylate layer, of spherical particles (B) whose median size  $V_{50}$  is in the range from 10 to 150  $\mu$ m and whose refractive index differs from that of the polymethyl methacrylate matrix by a value in the range from 0 to 0.2, where the total concentration of the spherical scattering particles (A) and particles (B) is in the range from 1 to 60% by weight, based on the weight of the light-scattering polymethyl methacrylate layer,  $\frac{1}{3}$  and the spherical scattering particles (A) and spherical particles (B) have a different

wherein the median particle size  $V_{50}$  of the spherical particles (B) is greater by at least 5  $\mu$ m than the median particle size  $V_{50}$  of the spherical scattering particles (A), where wherein the transmittance of the diffuser sheet is in the range from 20 to 70% and its scattering power is greater than 0.3, and wherein the ratio of the square of average surface roughness of the polymethyl methacrylate layer  $R_Z$  to the third power of the size of the spherical particles (B)  $R_Z^2/D_{PB}^3$  is in the range from 0.0002 to 0.1300  $\mu$ m<sup>-1</sup>.

Claim 2 (Previously Presented): The diffuser sheet according to Claim 1, wherein the ratio of the square of average surface roughness of the polymethyl methacrylate layer  $R_Z$  to the third power of the size of the spherical particles (B)  $R_Z^2/D_{PB}^3$  is in the range from 0.0009 to 0.0900  $\mu m^{-1}$ .

Claim 3 (Previously Presented): The diffuser sheet according to Claim 1, wherein the ratio of concentration of the particles (B) c<sub>PB</sub> to the thickness of the light-scattering polymethyl methacrylate layer d<sub>S</sub> c<sub>PB</sub>/d<sub>S</sub> is greater than or equal to 2.5% by weight/mm.

Claim 4 (Previously Presented): The diffuser sheet according to Claim 1, wherein the gloss R85° of the light-scattering polymethyl methacrylate layer is smaller than or equal to 40.

Claim 5 (Previously Presented): The diffuser sheet according to Claim 1, wherein the ratio  $c_{PA}$  \*d<sub>S</sub>/D<sub>PA</sub><sup>3</sup> is in the range from 0.0025 to 0.3% by weight\*mm/ $\mu$ m<sup>2</sup>.

Claim 6 (Previously Presented): The diffuser sheet according to Claim 1, wherein the ratio  $c_{PB}$  \*d<sub>S</sub>/ $D_{PB}$ <sup>3</sup> is in the range from 0.00005 to 0.02% by weight\*mm/ $\mu$ m<sup>2</sup>.

Claim 7 (Canceled).

Claim 8 (Previously Presented): The diffuser sheet according to Claim 1, wherein the spherical particles (B) comprise crosslinked polystyrene, polysilicone and/or crosslinked poly(meth)acrylates.

Claim 9 (Previously Presented): The diffuser sheet according to Claim 1, wherein the scattering particles (A) comprise BaSO<sub>4</sub>.

Claim 10 (Previously Presented): The diffuser sheet according to Claim 1, wherein the matrix of the light-scattering polymethyl methacrylate layer has a refractive index in the range from 1.46 to 1.54, measured for the sodium D line (589 nm) and at 20°C.

Claim 11 (Previously Presented): The diffuser sheet according to Claim 1, wherein the average surface roughness  $R_Z$  of the sheet is in the range from 6 to 30  $\mu m$ .

Claim 12 (Currently Amended): The diffuser sheet according to Claim 1, wherein the median size  $V_{50}$  of the spherical particle (B) is greater by at least  $\frac{5}{10}$   $\mu$ m than the median size of the scattering particles (A).

Claim 13 (Previously Presented): The diffuser sheet according to Claim 1, wherein the median size  $V_{50}$  of the spherical scattering particles (A) is in the range from 2 to 15  $\mu$ m.

Claim 14 (Previously Presented): The diffuser sheet according to Claim 1, wherein the median size  $V_{50}$  of the spherical particles (B) is in the range from 15 to 70  $\mu$ m.

Claim 15 (Previously Presented): The diffuser sheet according to Claim 1, wherein scratches produced on the sheet using a force of at most 0.7 N are not visually detectable.

Claim 16 (Previously Presented): The diffuser sheet according to Claim 1, wherein the long-term service temperature of the sheet is at least 60°C.

Claim 17 (Previously Presented): The diffuser sheet according to Claim 1, wherein the modulus of elasticity of the sheet is at least 2000 MPa.

Claim 18 (Previously Presented): The diffuser sheet according to Claim 1, wherein the longitudinal expansion of the sheet due to heating by at least 20°C is at most 5%.

Claim 19 (Previously Presented): The diffuser sheet according to Claim 1, wherein the weathering resistance of the sheet to DIN 53 387 is at least 5000 hours.

Claim 20 (Previously Presented): The diffuser sheet according to Claim 1, wherein the transmittance of the sheet is in the range from 40 to 65%.

Claim 21 (Previously Presented): The diffuser sheet according to Claim 1, wherein the yellowness index of the sheet is smaller than or equal to 12.

Claim 22 (Previously Presented): The diffuser sheet according to Claim 1, wherein the halved-intensity angle of the sheet is greater than or equal to 15°.

Claim 23 (Previously Presented): The diffuser sheet according to Claim 1, wherein the scattering power of the sheet is greater than or equal to 0.45.

Claim 24 (Previously Presented): A process for producing a diffuser sheet Claim 1, comprising extruding a moulding composition comprising polymethyl methacrylate, spherical scattering particles (A) and spherical particles (B) to form the diffuser sheet.

Application No. 10/566,249 Reply to Office Action of October 17, 2008

Claims 25-26 (Canceled).

Claim 27 (Previously Presented): An optical device comprising the diffuser sheet according to Claim 1.

Claim 28 (Previously Presented): A rear-projection screen comprising the diffuser sheet according to Claim 1.

Claim 29 (New): The diffuser sheet for LCD applications of Claim 1 comprising at least one light-scattering polymethyl methacrylate layer having an average surface roughness  $R_z$  in the range from 5 to 25  $\mu m$ .

Claim 30 (New): The diffuser sheet for LCD applications of Claim 1 comprising at least one light-scattering polymethyl methacrylate layer having an average surface roughness  $R_z$  in the range from 6 to 35  $\mu m$ .
